

Patient Summary

Kimberly Lawrence, born on 24/05/1977, is a 46-year-old Female. Her medical journey indicates a diagnosis of Type 2 Diabetes Mellitus accompanied by Peripheral Neuropathy. Current management focuses on glycemic control through medication and lifestyle adjustments, with regular monitoring for neuropathy progression. Overall, the patient health status is stable with ongoing management of chronic conditions.

Patient Demographics

Name: Kimberly
Lawrence

DOB: 24/05/1977

Age: 46

Sex: Female

SSN: 567-45-5412

Hospital ID: HOSP26508961

Patient Lifestyle

Smoking Status: Never

Alcohol Consumption: Rarely

Diet Preference: Diabetic-friendly

Exercise Habits: Mild

Patient Vitals

Heart Rate: 72

Respiratory Rate: 16

Temperature Celsius: 36.7

Oxygen Saturation Percent: 98

Blood Pressure: 130/85 mmHg

Recorded Date: 15/11/2024

Doctor Information

Doctor Name:
Cheryl
Blankenship

Doctor Unique ID:
DR14144B

Doctor Notes

Subjective Observations: Patient reports stable blood sugar levels and controlled peripheral neuropathy symptoms with current medication regimen. Reports following a diabetic-friendly diet and mild exercise routine. Denies any recent episodes of hypoglycemia or hyperglycemia. Complains of occasional tingling in feet.

Assesment: Patient presents with well-managed Type 2 Diabetes Mellitus and stable Peripheral Neuropathy. Lipid profile and renal function are within acceptable ranges. ECG shows no significant abnormalities.

Recommendations: Continue current medication regimen. Reinforce adherence to diabetic diet and exercise plan. Consider adjusting Gabapentin dosage if tingling becomes bothersome. Consider physical therapy consultation for neuropathy.

Follow Up Instruction: Schedule follow-up appointment in 3 months for HbA1c and CMP monitoring. Return sooner if any new symptoms arise or existing symptoms worsen.

Doctor Information

Doctor Name: Samantha Watson
Doctor Unique ID: DR37377A

Doctor Notes

Subjective Observations: Patient reports continued pain in lower extremities, particularly at night. Reports good adherence to medication regimen and diet. Patient reports occasionally feeling dizzy.

Assesment: Patient remains stable with Type 2 Diabetes Mellitus and peripheral neuropathy. Glucose control is within target range, but neuropathy symptoms persist. Dizziness could be related to medication or blood pressure; further investigation warranted.

Recommendations: Continue current medication regimen. Monitor blood glucose levels regularly. Start taking blood pressure at home. Consider referral to physical therapy for neuropathy. Rule out medication-related dizziness.

Follow Up Instruction: Follow-up appointment in 3 months. Schedule ECG and peripheral nerve conduction study. Contact clinic if dizziness worsens or new symptoms develop.

Sandra

Rodriguez

Doctor Unique ID: DR74095C

Doctor Notes

Subjective Observations: Patient reports experiencing pain and stiffness in the knees and hips, particularly in the morning and after prolonged activity. She describes the pain as a dull ache, occasionally sharp. Reports adherence to medication regimen but notes only moderate relief.

Assesment: Patient presents with symptoms consistent with osteoarthritis. Examination reveals limited range of motion and crepitus in the affected joints. Vitamin D level within normal limits. No signs of acute inflammation.

Recommendations: Continue current medication regimen. Recommend physical therapy to improve joint mobility and strengthen surrounding muscles. Consider hyaluronic acid injections if pain persists. Discuss weight management strategies.

Follow Up Instruction: Schedule follow-up appointment in 3 months to assess progress and adjust treatment plan as needed. Patient to monitor pain levels and report any significant changes. Return earlier if experiencing new or worsening symptoms.

Patient Summary

Theresa Anthony, born on 27/03/1936, is a 73-year-old Female patient. The patient has a history of Chronic Obstructive Pulmonary Disease (COPD), requiring continuous monitoring and management of symptoms. The patient's current health status involves maintenance therapy to mitigate COPD exacerbations, focusing on bronchodilation and anti-inflammatory measures. Regular pulmonary function tests are scheduled to evaluate disease progression and adjust treatment plans accordingly.

Patient Demographics

Name: Theresa Anthony

DOB: 27/03/1936

Age: 73

Sex: Female

SSN: 703-47-9647

Hospital ID:
HOSP22859156

Patient Lifestyle

Smoking Status: Former

Alcohol Consumption: Rarely

Diet Preference: Diabetic-friendly

Exercise Habits: Mild

Patient Vitals

Heart Rate: 82

Respiratory Rate: 18

Temperature Celsius: 36.7

Oxygen Saturation Percent: 94

Blood Pressure: 130/85 mmHg

Recorded Date: 15/11/2024

Doctor Information

Doctor Name: Kristi Anderson

Doctor Unique ID: DR90104C

Doctor Notes

Subjective Observations: Patient reports increased shortness of breath, especially with exertion. Complains of occasional wheezing

and chest tightness. Reports good adherence to medication regimen.

Assesment: Patient presents with stable COPD, but shows signs of mild exacerbation. Oxygen saturation slightly decreased at rest. Requires further evaluation to rule out infection or other complications.

Recommendations: Increase Albuterol PRN. Consider a short course of oral corticosteroids if symptoms worsen. Monitor oxygen saturation closely. Schedule follow-up pulmonary function test in 1 month.

Follow Up Instruction: Return to clinic if symptoms worsen or new symptoms develop. Contact clinic immediately if experiencing severe shortness of breath or chest pain. Continue current medication regimen as prescribed.

Electrocardiogram (ECG)	Done	08/11/2023

Patient Summary

Michael Brian Payne, born on 26/01/1961, is a 39-year-old Male patient diagnosed with Chronic Obstructive Pulmonary Disease (COPD). He has a history of respiratory issues and has been undergoing treatment involving medication and regular check-ups to manage the condition. Current health status requires continuous monitoring and adherence to the prescribed treatment plan to prevent exacerbations.

Patient Demographics

Name: Michael
Brian
Payne

DOB: 26/01/1961

Age: 39

Sex: Male

SSN: 041-81-2082

Hospital ID: HOSP89674514

Patient Lifestyle

Smoking Status: Former

Alcohol Consumption: Rarely

Diet Preference: Diabetic-friendly

Exercise Habits: Mild

Patient Vitals

Heart Rate: 78

Respiratory Rate: 18

Temperature Celsius: 36.8

Oxygen Saturation Percent: 96

Blood Pressure: 130/85 mmHg

Recorded Date: 03/11/2024

Doctor Information

Doctor Name:
Robin
Mccarthy

Doctor Unique ID:
DR24669B

Doctor Notes

Subjective Observations: Patient reports increased shortness of breath and cough, especially in the mornings. Complains of wheezing and chest tightness. Reports adherence to medication schedule, but struggles with exercise due to dyspnea.

Assesment: Patient presents with signs of COPD exacerbation. Pulmonary function tests indicate decreased FEV1 and FVC. Chest X-ray shows hyperinflation of lungs. ABG reveals mild hypoxemia.

Recommendations: Increase Albuterol usage as needed. Continue Fluticasone and Theophylline as prescribed. Consider pulmonary rehabilitation to improve exercise tolerance. Initiate a short course of Prednisone to reduce inflammation.

Follow Up Instruction: Schedule follow-up appointment in 2 weeks to assess response to treatment. Monitor oxygen saturation at home and report any significant changes. Continue lifestyle modifications, including smoking cessation and avoiding irritants.

Past Hospital Visits

Date	Reason
15/08/2024	COPD exacerbation
22/05/2024	Routine check-up for COPD
10/02/2024	Respiratory infection
05/11/2023	Annual physical examination
12/08/2023	Follow-up appointment after COPD diagnosis
28/03/2023	Bronchitis

Current Medications

Medication Summary	Dosage	Frequency
Albuterol	2.5 mg	Every 4 hours as needed
Ipratropium Bromide	500 mcg	Every 6 hours
Fluticasone	250 mcg	Twice daily
Theophylline	200 mg	Twice daily
Prednisone	20 mg	Once daily for 5 days (tapering dose)
Azithromycin	250 mg	Once daily for 5 days

Medical Tests

Medication Test	Status	On/Last
Pulmonary Function Test	Done	28/10/2024
Chest X-ray	Done	28/10/2024
Arterial Blood Gas	Done	28/10/2024
Sputum Culture	Pending	02/11/2024
Complete Blood Count	Done	28/10/2024
CT Scan	Pending	05/11/2024

Patient Summary

Nicole Garner, born on 11/10/1945, is a 78-year-old Female patient diagnosed with Type 2 Diabetes Mellitus. Her treatment history includes medication management and lifestyle modifications to control blood sugar levels. Current health status involves monitoring blood glucose and managing any associated complications. Regular check-ups are scheduled to assess overall well-being and adjust treatment plans as needed.

Patient Demographics

Name: Nicole Garner

DOB: 11/10/1945

Age: 78

Sex: Female

SSN: 699-06-1965

Hospital ID: HOSP80583520

Patient Lifestyle

Smoking Status: Former

Alcohol Consumption: Rarely

Diet Preference: Diabetic-friendly

Exercise Habits: Mild

Patient Vitals

Heart Rate: 72

Respiratory Rate: 16

Temperature Celsius: 36.8

Oxygen Saturation Percent: 97

Blood Pressure: 130/85 mmHg

Recorded Date: 02/11/2023

Doctor Information

Doctor Name: Kevin Ford

Doctor Unique ID: DR57329C

Doctor Notes

Subjective Observations: Patient reports feeling well overall, with good control of blood sugar. No complaints of chest pain, shortness of breath, or peripheral neuropathy.

Assesment: Well-controlled Type 2 Diabetes Mellitus. Stable cardiovascular status. No acute medical issues.

Recommendations: Continue current medication regimen. Reinforce importance of adhering to diabetic-friendly diet and regular exercise. Monitor blood glucose levels regularly.

Follow Up Instruction: Schedule follow-up appointment in 3 months for routine check-up and lab work. Contact clinic immediately if experiencing any new or worsening symptoms.

Past Hospital Visits

Date	Reason
15/08/2023	Routine Diabetes Check-up
22/05/2023	Eye Exam (Diabetic Retinopathy Screening)

Alcohol Consumption: Rarely
Diet Preference: Diabetic-friendly
Exercise Habits: Mild

Patient Vitals

Heart Rate: 78
Respiratory Rate: 16
Temperature Celsius: 36.7
Oxygen Saturation Percent: 97
Blood Pressure: 130/85 mmHg
Recorded Date: 15/11/2024

Doctor Information

Doctor Name:
Ryan
Flores
Doctor Unique ID: DR49671A

Doctor Notes

Subjective Observations: Patient reports feeling well-controlled on current medication regimen. No complaints of chest pain, shortness of breath, or peripheral edema. Reports occasional fatigue.

Assesment: Patient with Type 2 Diabetes Mellitus and hypertension. HbA1c within target range. Lipid panel shows elevated LDL cholesterol. ECG shows normal sinus rhythm.

Recommendations: Continue current medication regimen for diabetes and hypertension. Increase exercise to 30 minutes of moderate activity most days of the week. Dietary modifications to reduce saturated fat intake. Consider adding Omega 3 supplements for lowering cholesterol.

Follow Up Instruction: Follow-up appointment in 3 months for repeat HbA1c and lipid panel. Schedule microalbumin test to assess kidney function.

Past Hospital Visits

Date	Reason
02/08/2024	Routine check-up for diabetes management
15/05/2024	Flu symptoms

Patient Summary

John Oneill, born on 21/01/1971, is a 53-year-old Male patient currently under observation. He has a history of heart failure and is being managed with medication and lifestyle adjustments. Current health status is stable but requires continuous monitoring and adherence to the prescribed treatment plan.

Patient Demographics

Name: John
Oneill

DOB:
21/01/1971

Age: 53

Sex: Male

SSN: 738-58-2341

Hospital ID: HOSP71177723

Patient Lifestyle

Smoking Status: Former

Alcohol Consumption: Rarely

Diet Preference: Diabetic-friendly

Exercise Habits: Mild

Patient Vitals

Heart Rate: 72

Respiratory Rate: 16

Temperature Celsius: 36.8

Oxygen Saturation Percent: 97

Blood Pressure: 130/85 mmHg

Recorded Date: 26/10/2023

Doctor Information

Doctor Name: Michael Hall

Doctor Unique ID:
DR53936A

Doctor Notes

Subjective Observations: Patient reports occasional shortness of breath and mild fatigue. No chest pain reported at this visit. Patient states medication adherence is good.

Assesment: Patient's heart failure is currently stable on medication. Blood pressure is slightly elevated. BNP levels are within acceptable range but require monitoring.

Recommendations: Continue current medication regimen. Recommend reducing sodium intake and increasing light physical activity. Monitor weight and edema.

Follow Up Instruction: Follow-up appointment in 3 months for repeat ECG and blood work. Contact the office sooner if symptoms worsen.

Past Hospital Visits

Date	Reason
15/09/2023	Follow-up appointment for heart failure management
02/08/2023	Chest pain evaluation
18/07/2023	Routine blood work and ECG
05/06/2023	Edema in lower extremities
